

Tushar Verma

7338160223 | verma.tushar1609@gmail.com | Bengaluru | [Linkedin](#)

SUMMARY

Tech Lead with **8+** years of experience building cloud-native **distributed systems**, improving reliability and performance, and delivering **scalable microservices** in production environments with strong **SLA/SLO** ownership. Strong expertise in **data structures** and **algorithms**, **system design**, **observability**, and **scalability**. Proven track record of leading **cross-functional teams**, **driving architectural** decisions, and building resilient backend platforms for **high-throughput** workloads

EXPERIENCE

Yatharth Innovations Pvt. Ltd.

Oct '25 - Present

Founding Engineer (Contributor) | TWOOSH

- Creating an intent-driven live discussion platform in collaboration with **co-founders**, enabling users to discover and join topic-based conversations
- Built **Cassandra** data models for low-latency, horizontally scalable session and activity data
- Architected an intent-driven real-time discussion platform using **Golang, LiveKit, NodeJS, WebSockets, and WebRTC** designed for low-latency chat, audio, and video communication at high concurrency

MakeMyTrip

Jan '25 - Oct '25

Tech Lead

- Led a team of **8** engineers to build and operate backend services handling cab booking traffic, Drove architectural decisions, conducted design and code review and mentored engineers
- Spearheaded a multi-source data pipeline into **ClickHouse** and built an **AI-powered** NL-to-SQL tool, achieving **~90%** accuracy and reducing manual effort by **~40%**

MakeMyTrip

Jan '23 - Dec '24

Senior Software Developer II

- Engineered containerized QA infrastructure using **Docker, Traefik, and Portainer**, cutting environment setup time from hours to **<1 hour**
- Owned end-to-end delivery of a **Recommendation Engine** optimizing cab inventory allocation, improving category discovery and booking relevance by **~20–25%**

MakeMyTrip

May '21 - Dec '22

Senior Software Developer I

- Owned end to end migration from **HTTP REST** to **gRPC + Protobuf**, significantly reducing inter-service latency by **~40%** and improving backend throughput
- Strengthened observability across microservices using **distributed tracing, centralized logging, and dashboards**, reducing debugging time by **~20–30%**

Colortokens

Apr '20 - May '21

Member of Technical Staff II

- Drove migration from monolithic architecture to **microservices** across **5+** services, decoupling tightly coupled components and enabling independent scaling and deployment of critical services
- Built a **NodeJS + Electron** desktop application serving as a UI control plane for background security services, improving operational visibility and reducing manual intervention overhead

Software Developer

- Contributed to backend services for a real-money gaming platform supporting thousands of active users, enabling scalable architecture, deployment, and reliable production operations
- Designed core backend logic for a **high-concurrency** gaming engine handling **2k+ concurrent users**, improving parallel request handling, game-state consistency, and overall gameplay reliability

Mubble Network

Nov '17 - Aug '18

Associate Product Engineer

- Engineered a scalable web scraping framework processing **20+** news sources daily, improving data collection efficiency and ingestion reliability

SKILLS

Languages : **Java, Golang, NodeJS, Python**

Frameworks & Tools: **Spring Boot, Gin, LiveKit, Django, NestJS, FastAPI**

Backend and Architecture : **Microservices, Distributed Systems, Event-Driven Architecture, System Design**

Databases : **MongoDB, Redis, PostgreSQL, Elasticsearch, Clickhouse, Cassandra**

Messaging & Streaming : **Kafka, NATS**

Cloud and Infrastructure : **AWS, Docker**

Observability : **APM, Grafana, Distributed Tracing**

AI/ML Exposure : **GPT, TensorFlow, MCP, Tool Calling, Langchain, Langgraph**

EDUCATION

B-Tech Computer Science

Jan '13 - Jan '17

Madan Mohan Malaviya University Of Technology

Gorakhpur, UP

PROJECTS

SYSTEM AGENT

- Built and published a **Homebrew**-based distributed AI terminal agent enabling conversational system command execution via natural language
- Orchestrated agent workflows using **LangGraph** and **LangChain** for multi-step reasoning and tool execution

INSIGHT-X

- Designed an anomaly detection system during **Go-MMT Hackathon 2024** to improve issue detection.
- Implemented **Prophet**-based forecasting and backend incident analysis via alert-triggered reporting pipelines, improving incident visibility and proactive operational response

SERVICE MONITOR

- Established monitoring pipelines using **Prometheus**, reducing incident detection time by **20%** and improving system visibility
- Improved real-time observability of production services

GRAVILE

- Created a C++ tool for graph and **tree visualization**, improving code analysis and debugging efficiency
- Reduced code debugging time in timed coding contests by enabling faster visual analysis of program structure and dependencies
